DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 2, 4-11, 13, 14 and 18 are rejected under 35 U.S.C. 102(e) as being anticipated by Zhu et al (US 7,009,396).

3. As regards to claim 1, applicant's attention is directed to figure 1 of Zhu et al comprising a magnetic resonance imaging apparatus in which a fixed field of view is defined in which magnetic resonance is excited and phase and frequency are encoded, the apparatus including a plurality of fixed whole body receive coils (global), where a subject continuously moved through the fixed field of view during excitation phase and frequency encoding during the imaging process, and wherein in each of the global receiving coil receives resonance signals from the subject over an elongated virtual field of view longer than the fixed field of view. Further, Zhu et al teach means for generating coil sensitivity patterns and for mapping the sensitivity patterns from static reference acquisitions corresponding to the fixed field of view for the global receive coils (figure 1-3; column 3-5; see summary).

4. As regards to claim 6, Zhu et al teaches each limitation of the claim on the same basis as stated above to reject claim 1.
5. As regards to claims 2, 4, 5, 7-11,13,14 and 18, Zhu et al further teach subject movement fixed field of view in longitudinal direction, exciting and frequency encoding magnetic resonance acquiring resonance data along k-space trajectories to map sensitivity pattern(s) in to the virtual field of view corresponding to the magnetic resonance data on both sides of the center of the k-space combining and unfolding the folded image representations in accordance with the sensitivity patterns mapped into the virtual field of view (figure 1-4; column 4-8).
6. Claims 3, 12 and 15-17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brij B. Shrivastav whose telephone number is 571-272-2250. The examiner can normally be reached on 7 AM to 4 PM.
